FreezApp

Stage 1: Project proposal

1. Problem Description

Remembering what is in the freezer is not an easy task. Remembering expiration dates is even harder. This results in food waste and money loss.

2. Target Users

People struggling with food waste or just wanting to track what is in the freezer to be better organized.

3. Project Goal

Building a web application that will help users manage their freezer inventory. The app will allow users to track expiration dates of products, create shopping lists and suggest dishes based on already owned food.
